

ALMOST® Calf with HealthGard® and ALMOST® Textura with HealthGard® is produced with a registered EPA anti-microbial additive that makes this 100% nylon material anti-microbial and anti-bacterial.

ALMOST® Calf HG and ALMOST® Textura HG have been tested and are found to inhibit the growth of the bacteria Staphylococcus Aureus. Germs cannot survive on this product. The process is permanent and will not wash off.

The nylon fibers in ALMOST® are laid down in a three-directional axis similar to the natural structure of collagen that is found in leather, resulting in superior durability making it puncture and tear resistant. ALMOST® exceeds 250,000 double rubs, tested using the Wyzenbeek wire screen method.

ALMOST® is a material that is remarkably comfortable to sit on during any season. The

porous structure of Almost breathes by transmitting moisture vapor through billions of tiny micro-pores. In warm weather, excess heat is dissipated and in cold weather, it is retained. Because of the special finishing developed for ALMOST®, the color is an integral part of the material; permanently enriching it with a fresh appearance that will not fade or lose its beauty over time.

ALMOST® Calf and ALMOST® Textura are a great choice for public seating, healthcare, corporate and hospitality applications.

ALMOST® Calf HG has a natural leather-like texture and can be color matched to any customer color.

ALMOST® Textura HG has a simulated deeper grain and can be color matched to any customer color.
