## ALTA™ TREATMENTS & PROCESSING TECHNOLOGY

**Alta™** is the first and only technology engineered to deliver the exact protection needed for specific fabric uses and environments. The single or combined application of one of the following treatments will allow your fabrics to meet the specifications required in settings such as residential, healthcare, institutional, corporate, hospitality, entertainment and food services.

### **Alta™ Spill & Stain Repellent**

Provides a permanent and unmatched repellency to oil and water-based stains. Alta™ integrates seamlessly with fabric construction and will not compromise the hand or feel. The result is beautiful textiles that resist stains, abrasion, and pilling without sacrificing comfort or compliance.

### **Alta™ + Moisture Barrier**

A lightweight, breathable film barrier that is laminated to the back of fabrics to prevent liquids from being pushed through the fabric weave, therefore avoiding any contamination of the cushion beneath it. Coupled with Alta™ Spill & Stain Repellent, we would suggest using liquid barriers for food and beverage areas, healthcare and senior living environments.

### **Alta™ + Antimicrobial**

Reduces odors and risks of stains caused by microorganisms including bacteria, fungi and algae, thus avoiding degradation of the fabric. This technology can achieve more than 99.9% of bacterial reduction. The Alta™ antimicrobial technology has been tested to over 75 healthcare launderings with a 99.5% efficacy rate.

For additional treatment options, please contact customer service at [requests@paulbraytondesigns.com](mailto:requests@paulbraytondesigns.com) or 336-882-5200.  
Please note: Minimum order quantity of 10 yards. Pricing is based on standard widths of 53"-58" usable, all other widths will require a quotation.  
Presently we cannot treat vinyl, polyurethane, or leather with Alta.
