

What Makes ALMOST® a Superior Choice?

The Closest Alternative to Genuine Leather

ALMOST® is engineered to deliver the luxurious appearance and feel of real leather while providing superior performance and durability. Our proprietary manufacturing process creates a material that closely replicates natural leather without sacrificing practicality.

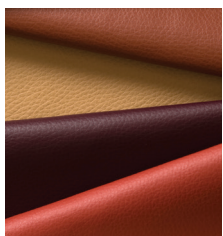

Breathable Comfort

ALMOST® allows heat and moisture vapor to pass through its structure, creating a breathable surface that remains comfortable in all environments, cooler in warm conditions and warmer in cooler temperatures.

Easy Maintenance

Routine cleaning requires only soap and water. Tough stains can be removed using mild household cleaners or a diluted bleach solution (1:10), making ALMOST® an excellent choice for healthcare, hospitality, corporate, education, and other high-traffic environments.

Built For Performance

The exceptional durability of ALMOST® makes it the ideal solution for demanding applications. Its substrate is composed of microscopic nylon fibers that are approximately 1,000 times finer than silk, creating remarkable strength and resilience.

Colors, Patterns & Customization

ALMOST® offers unmatched design flexibility with over 300 standard colors and the ability to create custom color matches from virtually any Pantone® color chip.* Customers can choose from 24 distinctive patterns and further personalize their selections with embossed textures or embroidered logos and slogans.

Unlike surface-coated materials, ALMOST® integrates color directly into the fiber structure using heat and pressure. This advanced process creates a rich, consistent appearance that resists peeling, fading, and wear, helping maintain a fresh, beautiful look for years. **Custom color strike-offs are available for approval within 2–3 weeks of receiving the color match request.*

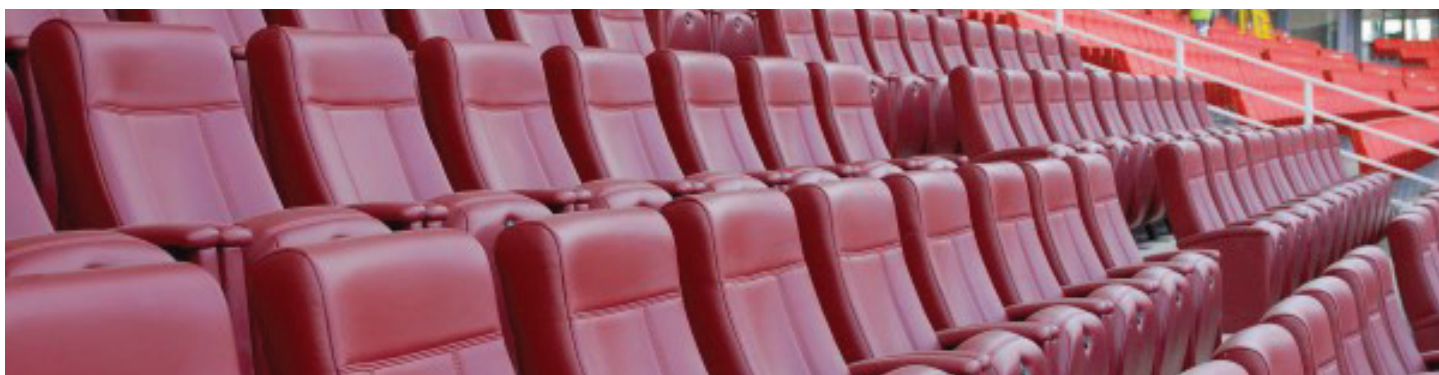

Performance Benefits

- Scratch resistant
- Tear resistant
- Puncture resistant
- Color will not peel or delaminate
- Long-lasting appearance and performance
- Excellent value over the life of the product

Because the color is permanently integrated into the fiber structure, ALMOST® maintains its beauty and integrity even in high-use environments.
