BRAYTON

TEXTILE: SUSTAINABILITY STATEMENT

BRAYTON includes a vast collection of faux options that are PVC and Phthalate Free, including nylon matrix constructions, polycarbonate and vinyl.

Our textile patterns include many with post-consumer recycled content, sourced primarily from used plastic water bottles, natural fibers such as wool without added FR, and responsibly manufactured polyester blends.

We support the Healthier Hospital Initiative through our offering of tested products that meet the goals of the Safer Chemicals Challenge, and comply with all Prop 65 warnings where applicable.

We partner with U.S. based yarn suppliers and mills for more than 95 percent of our textiles, primarily on the east coast within 500 miles of our facility. Our finishers are in North Carolina where we stock and ship all of our line.

BRAYTON actively encourages our own staff to eliminate waste, reduce water and paper consumption, avoid pollution, conserve energy and use responsible manufacturing practices. We meet or exceed all federal, state and industry requirements and actively strive to increase awareness and participation in improvement efforts towards sustainable practices.

For more information or to request test reports please contact us at requests@paulbraytondesigns.com.
